

Summary

Software Engineer with a background in finance and banking, currently focused on designing and building AI and machine learning systems: scalable ML pipelines, integration of models into production, and memory architectures for persistent conversational systems. I work daily in Python on scalable backends (FastAPI, Django) and on serverless services in AWS. My previous experience in managerial positions has equipped me with strong problem-solving and communication skills, while my portfolio of personal projects, including an AI-powered CV-to-job matching SaaS, shows my ability to take an idea from design to release. I also share technical content on YouTube. I'm currently deepening my cloud and DevOps skills (Docker, Kubernetes, CI/CD), an area I genuinely enjoy learning and keep improving in: I hold the AWS Certified Cloud Practitioner certification and I'm preparing for the AWS Certified Solutions Architect – Associate. I have also just enrolled in a BSc in Cybersecurity and Artificial Intelligence at Università Statale di Milano.

Latest Work Experience

20Tab S.r.l. | Backend & AI Developer

Remote | 06.2025 - Current

- **Scalable ML pipelines and heterogeneous data source integration (CNR / AUTOMA project):** built Python pipelines for image processing through machine learning models to identify invasive marine species in the Mediterranean, using AWS Lambda functions for serverless execution.
- **Conversational AI systems and memory architectures:** designed and developed, as backend and AI developer, a “digital consciousness” system: an AI replica able to represent a person's identity and memories for persistent, long-term dialogue.
- Technical research and benchmarking across LLM providers, evaluation of memory approaches (RAG, fine-tuning, Mem0, flat-file), comparison of agentic frameworks, and cost optimisation through prompt caching.
- Built and maintained scalable web applications using modern technologies across both frontend (NextJs/React) and backend (FastAPI/Django), with a strong focus on automated testing with Pytest.
- Containerised services with Docker and took my first steps with Kubernetes and CI/CD pipelines: a DevOps area still early in my journey, but one I really enjoy learning and want to keep growing into.
- Worked in cross-functional agile teams to deliver high-quality features at scale.

Projects

Resumatcher | [Github](https://github.com) - www.resumatcher.xyz - [Youtube](https://www.youtube.com/@voimdiego)

- Backend: Python, FastAPI, PostgreSQL
- Frontend: NextJs, Typescript, TailwindCSS, ShadcnUI, Framer Motion
- Other: Docker, OpenAI API, Hugging Face, TanstackQuery, Clerk, Stripe, RapidAPI

Built a responsive full-stack SaaS application that allows users to upload their CV and automatically find the most relevant job opportunities through an AI-based matching system. Additionally, I documented the development process with a YouTube series, showcasing the behind-the-scenes of project creation. Originally built as a personal learning project, the platform still managed to attract around 30 active users during its initial launch.

FastAPI Docker Boilerplate | [Github](https://github.com) - [Youtube](https://www.youtube.com/@voimdiego)

- Backend: Python, FastAPI, PostgreSQL
- Other: Docker, UV, Pydantic, Alembic, SQLAlchemy

Built a modern, production-ready boilerplate for developing scalable CRUD APIs using FastAPI, PostgreSQL, Docker, and Alembic. The project follows best practices such as clean architecture, automatic database migrations, Pydantic-based input validation and interactive API documentation. The entire environment is containerized with Docker and optimized using the UV Python package manager.

Skills

Frontend: React | Typescript | TailwindCSS

Backend/Database: [Node.js](https://nodejs.org/) | Express | Python | PostgreSQL | MongoDB | Golang

Frameworks: NextJS | FastAPI | Django

AI/ML: LLM APIs | RAG | Embeddings | pgvector | LangChain/LangGraph | PyTorch | Hugging Face

DevOps/Cloud: Docker | Kubernetes | CI/CD | GitLab Pipelines | Git

Certifications

AWS Certified Cloud Practitioner (CLF-C01)	Amazon Web Services (2025)
Full Stack Development Master	Start2Impact University (2024)
Ethereum Developer Certification	Alchemy University (2023)
Blockchain Development Master	Start2Impact University (2022 - 2023)
CS50's Introduction To Computer Science Certification	Harvard University Online (2021 - 2022)
